

MINES AND MINING

DAILY-WEST CO. MAKES REPORT

Data of General Interest Concerning Last Year's Operations.

While the annual report of the Daily-West Mining company will not be issued in printed form for several days, possibly two or three weeks yet, Manager Ernest Hamberger yesterday consented to a perusal of the written documents for publication purposes. While the cold figures, as compiled in the report, indicate an addition to the reserve of only approximately \$15,000, there was really an operating gain of something like \$15,000. For one thing, the usual custom of not including the December operating expenses in the annual reports was departed from in the last December's accounts as represented in the figures as paid. That accounts for approximately \$42,000. Then there was the extraordinary expense of extending the drain tunnel into Daly-West territory, Ontario drain tunnel expense and the advance to the Ontario company of nearly \$1,000. Had these and other eligible items been accounted for in a different way, the gain of the five months' operation of the mine would have made a showing as indicated. Without taking the items in detail, the financial statement makes the following exhibit:

RECEIPTS.
Cash on hand Jan. 1, 1908.....\$30,967.31
Sales of crude ore.....225,749.38
Sales of concentrates.....150,621.25
Miscellaneous.....2,388.85
Total.....\$509,726.79

DISBURSEMENTS.
Mine account.....\$225,629.72
Mill account.....36,723.87
Assay office and expense account.....30,162.95
General expenses.....39,572.10
Ontario drain tunnel.....21,394.36
Advance Ontario company.....16,552.04
Inventories for two years.....1,236.72
Total.....\$372,372.81

Cash on hand Jan. 1, 1909.....\$311,484.79
Total.....\$880,588.10
As the cash balance in the insurance reserve fund amounts to \$8,520.17, the actual available cash balance amounts to \$899,068.26.

Reports on Mine and Mill.

The report of General Superintendent P. L. Williams, Jr., deals in a general way with operations during the year, while the report of Mine Superintendent Talbot recounts the mine work level by level. Mill Superintendent F. W. Shearman tells of the operation of the milling plant, and several tables explain numerous features of the operations of the company not necessary to deal with here and which will all appear in the published report as soon as everything can be made ready for the printer.

The amount of ore mined during the year included 52,124 tons of second class, which produced 4,424 tons of concentrates and 12,704 tons of first class, all of which was shipped and sold to the American Smelting & Refining company. There was 2,388 feet of development work done, the mine, of 2,925 feet was drifts, 500 feet crosscuts and thirty feet of sinking.

Mr. Williams explains in his report that an attempt was made to sink the main operating shaft to the 1,700-foot level and that a flow of water caused a suspension of the work at a point twenty-five feet above the 1,700 level. By sinking the shaft to the 1,700 level, the mill, which was to have reached and developed the Daly vein at that depth several months earlier than by waiting for connection on the Ontario drain tunnel level. In working to get under the bottom of the shaft on the Ontario drain tunnel level Mr. Williams states that several water courses have been cut and that this work is relieving the shaft of water, and while he does not state in the report, it may be expected that the work of sinking in the shaft will be shortly resumed.

The Ontario drain tunnel reached the boundary line between the Daly and Daily-West company Aug. 15 last. On Jan. 1 it had been advanced by the Daly-West company into its own territory 74 feet to a point opposite the operating shaft. From that point it is necessary to cut 43 feet of crosscutting to get directly under the bottom of the shaft at an additional depth of 400 feet, while another crosscut 820 feet long must be run to connect with the vein in a northwesterly direction from the terminal point of the drain tunnel.

In reviewing operations at the milling plant the superintendent states that the works were closed from Jan. 1 to June 16. The actual time during which the mill was treating ore was 229 nine-hour shifts. During that time 52,124 dry tons of ore was treated. From this 43,715 tons of shipping grade rock was hand-picked, while 8,409 tons was actually crushed and concentrated. This was at the rate of 18.9 tons per shift, or on a basis of 45 tons per day with the mill running full time. The record shows that 5.24 tons of crude ore was worked into one ton of concentrates, while the average amounted to 9.25 per cent of the lead in the ore and 7.9 per cent of the silver. All of these features will appear in detailed form in the tables that will accompany the reports of the various officials when made up and printed for distribution among the shareholders.

Foley's Honey and Tar clears the air passages, stops the irritation the throat soothes the inflamed membranes, and the most obstinate cough disappears. Sore and inflamed throats are healed and strengthened, and the cold is expelled from the system. Refuse any but the genuine in the yellow package. F. J. Hill Drug Co.

MORE CAPACITY AT CACTUS MILL

Remodeling of Plant Begins, the Object Being to Treat More Ore.

A complete overhauling and remodeling of the Cactus mill has just been decided upon by General Manager T. R. Drummond. One-half of the big plant was closed down yesterday and the work planned was commenced. A. J. Bettles, the mill expert and metallurgical engineer of the Newhouse staff, was called into consultation by Manager Drummond and on Saturday the changes to be made were decided upon. Mr. Bettles returned to the city yesterday morning.

It is planned to increase the capacity of the mill to somewhere between 1,000 and 1,200 tons a day, said Mr. Bettles yesterday. One-half of the mill has been closed down for the purpose of making the necessary changes. By the first of April this should be accomplished. While changes are being made in the first half, the other half will be kept running. When the first half is changed, the second half will be closed down and the introduction of a better classification system, one that will permit the handling of a much larger tonnage than does the method now employed.

Mr. Bettles would not discuss the mine nor conditions in it. He stated that he had had no time to inspect the property, and as he was in no way connected with its management or handling, he was not qualified to say anything about it.

"All I know about the mine end of the proposition," explained Mr. Bettles, "is that I found the bins all full of ore, so there was evidently no trouble being experienced in supplying all the tonnage the plant could handle. The fact that it is the purpose of the management to increase the capacity and efficiency of the milling plant is evidence that the mine is all right and good for several hundred tons more a day than it is now being called upon to supply. But, if you want to know anything about mine conditions you must tackle Mr. Drummond, for that is something I know absolutely nothing about."

Mr. Bettles reported that the storm of the winter was raging through Beaver county Sunday and Sunday night. He left Newhouse in a raging storm and when he reached Milford he found that a full twelve inches of snow had fallen and that a genuine blizzard was raging. He could hardly believe his senses when he awoke in this valley yesterday morning and found that it had not stormed here at all.

OPENING UP SILVER-LEAD MINES NEAR HAWTHORNE

J. G. Atchison, one-time county recorder, and whose home is in Hawthorne, is in the city on business which may result in his appointment by Sheriff Bradley as deputy county assessor, to look after the north end of Esmeralda, says the Goldfield Tribune.

The miners here state that just at this time the Hawthorne district is enjoying a season of unusual prosperity.

In the territory around what is known as Bodie grade, said he, "things are looking fine. The different properties being operated in that area are being worked with big strikes, and shipments of the ore are going out regularly. On the Mountain King claim of the Goldfield Mining company, a vein has been found at a depth of 600 feet right on the ledge all the way down, with the values constantly growing better, and the vein widening all the time. A hoist has been erected on this property, and the ore, which runs better than \$150 per ton in lead and silver, is being raised and shipped at the rate of about twenty tons per day, by wagon and team, to Thorne, from which place it goes to the smelters at Salt Lake.

The Lucky Boy probably the highest values have been obtained, the ore being a very high-grade silver, with a paying percentage of 50 per cent.

"On the Durand, owned by the Christianson brothers, where a lease is being made, the ore is now being sacked for shipment. On this property they have stripped the ledge for a distance of 400 feet, and have exposed a vein right on the surface of from six inches to one and a half feet, which is almost the pure metal, and the ore is being shipped in quantities of 200 tons per day. Shipments will begin from this ground within the next few days.

"On the Tiffany claim, where work is in progress about 30 feet north of the hoist of the Mountain King, the same big ledge which runs through the vein, and which is about 200 feet wide, is being worked, and the ore is being shipped in quantities of 200 tons per day. Shipments will begin from this ground within the next few days.

"On the Tiffany claim, where work is in progress about 30 feet north of the hoist of the Mountain King, the same big ledge which runs through the vein, and which is about 200 feet wide, is being worked, and the ore is being shipped in quantities of 200 tons per day. Shipments will begin from this ground within the next few days.

"On the Tiffany claim, where work is in progress about 30 feet north of the hoist of the Mountain King, the same big ledge which runs through the vein, and which is about 200 feet wide, is being worked, and the ore is being shipped in quantities of 200 tons per day. Shipments will begin from this ground within the next few days.

"On the Tiffany claim, where work is in progress about 30 feet north of the hoist of the Mountain King, the same big ledge which runs through the vein, and which is about 200 feet wide, is being worked, and the ore is being shipped in quantities of 200 tons per day. Shipments will begin from this ground within the next few days.

"On the Tiffany claim, where work is in progress about 30 feet north of the hoist of the Mountain King, the same big ledge which runs through the vein, and which is about 200 feet wide, is being worked, and the ore is being shipped in quantities of 200 tons per day. Shipments will begin from this ground within the next few days.

"On the Tiffany claim, where work is in progress about 30 feet north of the hoist of the Mountain King, the same big ledge which runs through the vein, and which is about 200 feet wide, is being worked, and the ore is being shipped in quantities of 200 tons per day. Shipments will begin from this ground within the next few days.

"On the Tiffany claim, where work is in progress about 30 feet north of the hoist of the Mountain King, the same big ledge which runs through the vein, and which is about 200 feet wide, is being worked, and the ore is being shipped in quantities of 200 tons per day. Shipments will begin from this ground within the next few days.

"On the Tiffany claim, where work is in progress about 30 feet north of the hoist of the Mountain King, the same big ledge which runs through the vein, and which is about 200 feet wide, is being worked, and the ore is being shipped in quantities of 200 tons per day. Shipments will begin from this ground within the next few days.

"On the Tiffany claim, where work is in progress about 30 feet north of the hoist of the Mountain King, the same big ledge which runs through the vein, and which is about 200 feet wide, is being worked, and the ore is being shipped in quantities of 200 tons per day. Shipments will begin from this ground within the next few days.

"On the Tiffany claim, where work is in progress about 30 feet north of the hoist of the Mountain King, the same big ledge which runs through the vein, and which is about 200 feet wide, is being worked, and the ore is being shipped in quantities of 200 tons per day.
